Internship Task

USER MANAGEMENT SYSTEM

Technology Stack: Next.js, Node.js, Supabase, Tailwind CSS

Build a modern, professional, and responsive User Management System with separate Admin and User panels.

1. User Panel

- User registration, login, and logout.
- Users must wait for admin approval before accessing the dashboard.
- View account status: Pending, Approved, Rejected, or Deactivated.
- View and update profile details.
- View notifications and account activity.
- Access a Support History page.

2. Admin Panel

- Secure admin login.
- View all registered users.
- Approve or reject new registrations.
- Deactivate or reactivate user accounts.
- Delete users when necessary.
- Search and filter users by account status.
- View dashboard statistics.
- View and manage all support requests.
- Reply to support requests and update their status.

3. Complete Support History Feature

- Users can create support requests with a subject, category, and description.
- Users can view their submitted requests and submission dates.
- Each request must have a unique ID and status: Open, In Progress, or Resolved.
- Admin can view requests, respond to users, and update request statuses.
- Users can view admin replies and track progress.
- Users can view their complete support history and conversation.
- Display loading states, validation messages, and empty states.

4. Technical Requirements

- **Frontend:** Next.js and Tailwind CSS.
- **Backend:** Node.js for server-side business logic and secure API endpoints.
- **Database and Authentication:** Supabase.
- Use Supabase Row Level Security (RLS) to protect user data.
- Implement secure role-based access control for Admin and User.
- Prevent pending, rejected, or deactivated users from accessing protected features.

- Use reusable components and maintain clean, well-structured code.
- Ensure responsive design.
- Use environment variables and never expose secret keys.

5. Deliverables

- GitHub repository with source code.

6. Evaluation Criteria

- UI/UX and responsiveness.
- Authentication and authorization.
- Admin approval workflow.
- Support request and history functionality.
- Database security and code quality.

Deadline: 4 hours

Submission Instructions: Once you complete the task, push your code to GitHub and send us the GitHub repository link.
